

THAT WHICH IS CLAIMED:

1. A method for providing travel-related information, comprising:
communicating with a customer over a computer network, wherein
5 communicating with the customer includes receiving contact information from the
customer;
identifying a plurality of experts, wherein the plurality of experts are in selective
communication with a destination expert server;
receiving, from the customer, a request relating to a destination city to which the
10 customer is interested in travelling;
selecting a destination expert of the plurality of experts, wherein the destination
expert has particular knowledge about the destination city, and
forwarding the customer's request and the customer's contact information to the
destination expert, such that the destination expert can communicate with the customer to
15 provide a response to the customer request.
2. The method of claim 1, wherein determining a destination expert
comprises determining a destination expert of the plurality of experts, wherein the
destination expert is located in the destination city.
20
3. The method of claim 2, wherein communicating with the customer over
the computer network includes receiving a credit card number from the customer.
4. The method of claim 2, wherein the destination expert response includes
25 an offer to book reservations relating to the customer request.
5. The method of claim 1, further comprising receiving the destination expert
response from the destination expert and forwarding the destination expert response to
the customer.
30

6. The method of claim 1, further comprising facilitating a transaction with the customer, wherein the transaction relates to the customer request.

7. The method of claim 1, further comprising monitoring communications of the destination expert server.

8. A system for accepting and responding to a customer request for travel information relating to a destination city, comprising:

a destination expert server;

10 a customer in communication with the destination expert server, wherein the customer submits a request to the destination expert server for information relating to the destination city, and

a plurality of experts in selective communication with the destination expert server, wherein the destination expert server forwards the customer request to a selected destination expert of the plurality of experts, and wherein the destination expert has particular knowledge about the destination city, such that the destination expert can communicate with the customer to provide a response to the customer request.

9. The system of claim 8, wherein the customer provides the destination expert server with customer contact information, and wherein the customer contact information is forwarded by the destination expert server to the destination expert.

10. The system of claim 8, wherein the destination expert is located in the destination city.

11. The system of claim 8, wherein the destination expert server is accessible to the customer via the internet.

12. The system of claim 10, wherein the plurality of experts are in selective communication with the destination expert server via electronic mail.

13. A computer-readable storage medium encoded with processing instructions for implementing a method performed by a destination expert server, said processing instructions directing a computer to perform the steps of:

communicating with a customer over a computer network, wherein
5 communicating with the customer includes receiving contact information from the customer;

identifying a plurality of experts, wherein the plurality of experts are in selective communication with the destination expert server;

receiving, from the customer, a request relating to a destination city to which the
10 customer is interested in travelling;

determining a destination expert of the plurality of experts, wherein the destination expert has particular knowledge about the destination city, and

forwarding the customer's request and the customer's contact information to the destination expert, such that the destination expert can communicate to the customer a
15 response to the customer request.

14. The computer-readable storage medium of claim 13, wherein the processing instructions for directing a computer to perform the step of determining a destination expert comprises processing instructions for directing the computer to
20 perform the step of determining a destination expert of the plurality of experts, and wherein the destination expert is located in the destination city.

15. The computer-readable storage medium of claim 14, wherein the processing instructions for directing a computer to perform the step of communicating
25 with the customer comprise processing instructions for directing a computer to perform the step of communicating with the customer over the computer network, wherein communicating with the customer over the computer network includes receiving a credit card number from the customer.

30 16. The computer-readable storage medium of claim 14, wherein the processing instructions for directing a computer to perform the step of forwarding the

customer's request and the customer's contact information to the destination expert comprises processing instructions for directing a computer to perform the step of forwarding the customer's request and the customer's contact information to the destination expert, such that the destination expert can communicate to the customer a response to the customer request, and wherein the destination expert response includes an offer to book reservations relating to the customer request.

17. The computer-readable storage medium of claim 14, wherein the processing instructions further direct the computer to perform the step of receiving the destination expert response from the destination expert and forwarding the destination expert response to the customer.

18. The computer-readable storage medium of claim 14, wherein the processing instructions further direct the computer to perform the step of facilitating a transaction with the customer, wherein the transaction relates to the customer request.

19. The computer-readable storage medium of claim 14, wherein the processing instructions further direct the computer to perform the step of monitoring communications of the destination expert server.

20. A device enabling customers access to experts located in cities to which the customers may wish to travel, where the experts can answer customer questions and book travel arrangements for the consumers, comprising:

a processor;

a storage device in communication with the processor via a system bus, and

a memory connected to the processor, the memory including an operating system for storing a program to control the operation of said processor, and a destination expert control module,

wherein the processor is operative with the destination expert control module to:

communicate with a customer over a computer network, wherein communicating with the customer includes receiving contact information from the customer;

identify a plurality of experts, wherein the plurality of experts are in selective communication with the destination expert server;

receive, from the customer, a request relating to a destination city to which the customer is interested in travelling;

5 determine a destination expert of the plurality of experts, wherein the destination expert is located in the destination city, and

forward the customer's request and the customer's contact information to the destination expert, such that the destination expert can communicate with the customer to provide a response to the customer request.

10

21. The device of claim 20, wherein the identification of a plurality of experts comprises confirming that the destination expert is familiar with the destination city.

15 22. The device of claim 20, wherein communicating with the customer over the computer network includes receiving a credit card number from the customer.

23. The device of claim 20, wherein the destination expert response includes an offer to book reservations relating to the customer request.

20 24. The device of claim 20, wherein the processor is further operative with the destination expert control module to receiving the destination expert response from the destination expert and forward the destination expert response to the customer.

25 25. The method of claim 20, wherein the processor is further operative with the destination expert control module to facilitate a transaction with the customer, wherein the transaction relates to the customer request.

30 26. The method of claim 20, wherein the processor is further operative with the destination expert control module to monitor communications of the destination expert server.
